Software Engineer with hands-on experience developing production backend services, and full-stack applications. Skilled in Python, Java, Spring Boot, RAG systems, cloud deployment, and building scalable, real-world solutions.

PROFESSIONAL EXPERIENCE

Software Engineer | Elysian Softech | Feb 2026–Present

- Developed and deployed production backend services powering AI-driven WhatsApp and voice agents.
- Designed and implemented RAG pipelines using LangChain and Qdrant, with metadata-based filtering for context-aware retrieval.
- Integrated CRM platforms and third-party APIs to automate business workflows and connect AI agents with external systems.
- Owned major features end-to-end, from requirements gathering and system architecture to implementation, testing, and production deployment.
- Collaborated directly with enterprise clients to understand business needs, define technical requirements, and deliver tailored solutions.
- Improved system performance and reliability by resolving production issues, optimizing backend processes, and implementing automated tests.

PROJECTS

- **Bubble.up - Collaborative Student Platform| Live Demo**
  - Launched to 150 beta users, validating stability at 50 concurrent users; integrated study-group matching, real-time chat, file sharing, calendars, video, and group workspaces.
  - Built a modular Spring Boot/PostgreSQL/WebSockets backend with domain separation and a multilingual React UI supporting i18n/RTL.
  - Engineered intelligent group-gap matching using quiz data, behavioral signals, confidence weighting, and cold-start trending.
  - Automated AWS EC2 production and isolated VPS demo deployments through separate GitHub Actions CI/CD workflows.

- **Distributed Text Processing System | Java, AWS EC2, SQS, S3**
  - Developed a distributed text analysis system with a manager–worker architecture, parallel processing on EC2, asynchronous messaging through SQS, and S3 storage.
  - Integrated Stanford NLP for linguistic analysis and aggregated processing results into HTML reports.

- **E-Commerce Marketplace | Java, Vaadin, Hibernate, JPA, AWS**
  - Developed a full-stack, Amazon-like marketplace with multi-store management, role-based access control, inventory tracking, order processing, and complex discount and purchase policies.
  - Implemented data persistence using Hibernate/JPA, integrated external payment and supply services, and deployed the application on AWS.

EDUCATION

B.Sc. in Software Engineering

Ben-Gurion University of the Negev | 2021–2025

Focus Areas: Python, Java, JavaScript, C++, C, SQL, PostgreSQL, Spring Boot, FastAPI, REST APIs, Redis, Celery, LLMs, RAG, LangChain, Qdrant, Hibernate/JPA, WebSockets, React, AWS (EC2, S3, SQS), Docker, CI/CD.

MILITARY SERVICE

Military Fitness Instructor | 2016-2018
volunteer (diabetes type 1), Completed a professional gym instructor course at Wingate Institute.

LANGUAGES

Hebrew & English (Fluent)
